

SOURCE CODE AUDIT

boxxocode "AI Trading Bot" Playlist Strategy Reference

Complete breakdown of every MT5 Expert Advisor source file recovered from the channel's free downloads: indicators, entry/exit logic, position sizing, risk controls, and every tunable input parameter with its real default value — read directly out of the .mq5 source, not inferred from the video.

44 strategies documented in full detail

8 flagged as high-risk designs (martingale / no-SL grid / asymmetric hedge)

Sourced from 84 videos in the channel's "ai trading bot" playlist

Compiled for personal backtesting research

Cross-Cutting Observations for Backtesting Priority

Highest risk / no-stop-loss designs — test with extreme caution, small size

- **#20a / #20b** (RSI Grid Close-All) — no per-trade SL, up to 14 simultaneous positions, optional exponential martingale multiplier
- **#36** (Grid Bot) — zero indicators, zero SL, both directions simultaneously, auto-restart loop
- **#34 / #35** (Gold Trend Grid) — grid with basket-only exit, optional martingale multiplier, "hard SL" only trips after grid is already maxed out
- **#01** (Martingale Dead Hours) and **#42** (misabeled "3 EMA Pullback with Higher") — explicit lot-doubling martingale, though both at least carry per-trade SL/TP
- **#77** (Grid EMA EURUSD H1) — hedged bi-directional grid, real per-trade SL but TP only 1/10th the SL distance

Cleanest, most complete designs — good backtesting starting points

- **#13** (Gold Pullback Continuation) — session filter, spread filter, ATR volatility filter, break-even
- **#22** (Support/Resistance GLM-Z) — dual bounce+breakout modes, live chart visualization
- **#09 / #15** (Swing Trading with working loss-cooldown) — functional consecutive-loss circuit breaker
- **#41** (S/R Claude) — proper multi-touch level validation vs. #40's naive single-lookback version

Bugs / inconsistencies worth knowing before testing

- **#14** — consecutive-loss cooldown inputs exist but are never wired up (dead code)
- **#33** — `InpUseTrailingStop` input has no actual implementation (empty handler stub)
- **#27b** — input comment labels (EMA200/50/20) don't match actual default periods (100/50/8)
- **#28** — `UseTrailing` input explicitly documented as unused placeholder
- **#31** — `InitialBalance` input is cosmetic only, no effect on sizing
- **#16** — hardcoded to EURUSD only; "news filter" is just a static hour blacklist, not a real calendar
- **#24** — hardcoded/warned for EURUSD only despite being generic-looking code

#01 Martingale the DEAD Market Hours

Claude AI

RISKY

INDICATORS

Selectable single signal: `ima` fast/slow crossover, `irsi`, or `ibands` (only the one selected is created).

ENTRY LOGIC

Only trades during a defined "dead session" time window (broker time) and allowed weekdays. On a new bar, one of three modes fires: MA fast/slow crossover, RSI oversold/overbought reversal, or price touching Bollinger Bands.

EXIT / RISK

Martingale — after initial entry, adds same-direction trades every `StepPoints` of adverse movement, multiplying lot by `LotMultiplier`, up to `MaxSteps`. Basket closed on floating \$ profit/loss target or forced-closed when leaving the dead session. Optional fixed per-trade SL/TP in points.

POSITION SIZING

Martingale multiplier (`InpLotMultiplier=2.0`) with a hard lot cap.

INPUTS (DEFAULTS)

- `InpMagicNumber = 123456` // Magic Number
- `InpTradeComment = "DeadHrMartin"` // Trade Comment
- `InpSlippagePoints = 10` // Max Slippage (points)
- `InpDeadStartHour = 22`, `InpDeadStartMinute = 0`, `InpDeadEndHour = 2`, `InpDeadEndMinute = 0`
- `InpTradeMonday..InpTradeFriday = true`, `InpTradeSaturday = false`, `InpTradeSunday = false`
- `InpCloseAllOutsideSession = true`
- `InpSignalTimeframe = PERIOD_M15`, `InpSignalMode = SIGNAL_RSI` (enum: MA_CROSS/RSI/BB)
- `InpRSIPeriod = 14`, `InpRSIOversold = 30.0`, `InpRSIOverbought = 70.0`
- `InpMAFastPeriod = 10`, `InpMASlowPeriod = 30`, `InpMAMethod = MODE_EMA`
- `InpBBBPeriod = 20`, `InpBBDeviation = 2.0`
- `InpInitialLot = 0.01`, `InpLotMultiplier = 2.0`, `InpMaxSteps = 5`, `InpStepPoints = 300`,
`InpMaxLotCap = 10.0`
- `InpBasketTPUSD = 5.0`, `InpBasketSLUSD = 0.0`, `InpPerTradeSLPoints = 0`, `InpPerTradeTPPoints = 0`
- `InpMaxSpreadPoints = 30`

NOTABLE

Explicit martingale doubling with only a \$5 basket TP target (very tight vs. 5-step 2x doubling exposure); designed to trade specifically in the lowest-liquidity hours ("dead market") which is unusual/risky; no basket SL by default (`InpBasketSLUSD=0.0` disables it).

Video: <https://www.youtube.com/watch?v=ri82bNmWVC4> | Source: <https://drive.google.com/file/d/1fsEvqEbxtF47V8uuLR-HpiifTtdYOBOM/view>

#02 Auto Momentum Trading

GLM AI

INDICATORS

iMA EMA(50), iADX (14), iRSI (14), iATR (14), all on PERIOD_CURRENT.

ENTRY LOGIC

Buy: price > EMA50, RSI > 55, ADX > 25, previous close > previous high (breakout continuation). Sell: mirrored (price < EMA50, RSI < 45, ADX > 25). Optional extra filters (ATR>0, close vs prev low).

EXIT / RISK

SL = ATR×1.5, TP = SL×RR(2.0). Manual exit rule closes positions when RSI crosses 50 or price crosses back over EMA50.

POSITION SIZING

Fixed lot (InpLotSize=0.1).

INPUTS (DEFAULTS)

- InpEmaPeriod = 50, InpAdxPeriod = 14, InpRsiPeriod = 14, InpAtrPeriod = 14
- InpAdxVolume = 25.0, InpRsiVolumeBuy = 55.0, InpRsiVolumeSell = 45.0
- InpLotSize = 0.1, InpSLMultiplier = 1.5, InpRRRatio = 2.0, InpMaxOpenTrades = 1, InpMagicNumber = 123456
- InpUseTradeFilters = true, InpUseExitRules = true

NOTABLE

Straightforward momentum-continuation EA, no time/session filter, no news filter.

Video: <https://www.youtube.com/watch?v=OkRQGbwZfeI> | Source: <https://drive.google.com/file/d/1OWYLMt-a2SazDNawpcISDjDbPZX1sg8G/view>

#03 Simple Momentum Trading Kimi AI

INDICATORS

`iMA` EMA(50), `iADX` (14), `iRSI` (14), `iATR` (14).

ENTRY LOGIC

Same core momentum logic as #02 (Close>EMA50 & RSI>55 & ADX>25 & Close>PrevHigh for buy; mirrored for sell), evaluated every tick with a new-bar gate.

EXIT / RISK

SL = ATR×1.5, TP = SL×2.0 RR, with `ValidateStops()` enforcing broker min-stop distance. Manual RSI/EMA exit rule.

POSITION SIZING

Fixed lot.

INPUTS (DEFAULTS)

- `InpMagicNumber = 123456`, `InpLotSize = 0.10`, `InpMaxOpenTrades = 1`
- `InpEMAPeriod = 50`, `InpADXPeriod = 14`, `InpRSIPeriod = 14`, `InpATRPeriod = 14`
- `InpADXVolume = 25.0`, `InpRSIBuyLevel = 55.0`, `InpRSISellLevel = 45.0`
- `InpATRMultiplierSL = 1.5`, `InpRiskRewardRatio = 2.0`
- `InpUseTradeFilter = true`, `InpUseExitRules = true`

NOTABLE

Near-identical logic/naming to #02 but different AI provider — same limitations (no session filter).

Video: <https://www.youtube.com/watch?v=jBvd3OQADZ8> | Source: <https://drive.google.com/file/d/1qDAz9TSJL7osov8JFTaNhLQoKtb4gWct/view>

#04 Simple Momentum Trading

Claude AI

INDICATORS

`iMA` EMA(50), `iADX` (14), `iRSI` (14), `iATR` (14) — evaluated strictly on last CLOSED bar (shift 1) to avoid repaint.

ENTRY LOGIC

Buy: $\text{close} > \text{EMA}$ & $\text{RSI} > 55$ & $\text{ADX} > \text{Threshold}(40)$ & $\text{close} > \text{prevHigh}$. Sell: $\text{close} < \text{EMA}$ & $\text{RSI} < 45$ & $\text{ADX} > 40$. Optional filter blocks entries if $\text{ADX} < \text{threshold}$, ATR below min points, or $\text{close} < \text{prevLow}$.

EXIT / RISK

$\text{SL} = \text{ATR} \times 1.5$, $\text{TP} = \text{SL} \times \text{RiskReward}(2.0)$, with broker min-stop-distance enforcement. RSI/EMA-based manual exit.

POSITION SIZING

Fixed lot.

INPUTS (DEFAULTS)

- `InpMagicNumber = 123456`, `InpLotSize = 0.1`, `InpMaxTrades = 1`, `InpSlippage = 10`, `InpTradeComment = "EMA_ADX_RSI_ATR"`
- `InpEMA_Period = 50`, `InpADX_Period = 14`, `InpADX_Volume = 40.0`
- `InpRSI_Period = 14`, `InpRSI_Volume_Buy = 55.0`, `InpRSI_Volume_Sell = 45.0`, `InpATR_Period = 14`
- `InpATR_SL_Multiplier = 1.5`, `InpRiskReward = 2.0`
- `InpUseTradeFilter = true`, `InpMinATRPpoints = 0`
- `InpUseExitRules = true`

NOTABLE

ADX threshold (40) stricter than sibling variants (25) — fewer trades expected; otherwise same family as #02/#03.

Video: <https://www.youtube.com/watch?v=SBzUe3CBADs> | Source: <https://drive.google.com/file/d/1HfOa6OSLWd1I8a8CKzbtU2keLHLmEwEo/view>

#05 Simple Daily EMA-ADX-ATR

Claude AI

INDICATORS

iMA EMA(25 fast)/EMA(200 trend) on PERIOD_D1 (daily), iADX (14), iATR (7).

ENTRY LOGIC

Trend + pullback: Buy needs close > EMA200 & EMA25 > EMA200 (uptrend), ADX > 20, low pulled back to/through EMA25 within last 2 bars, and current bar closes bullish above EMA25. Sell is the mirror.

EXIT / RISK

SL = ATR(7) × 1.0, TP = SL × 2.0 RR, enforced against broker min-stop distance.

POSITION SIZING

Fixed lot (InpLots=0.10).

INPUTS (DEFAULTS)

- InpMagicNumber = 20260601, InpTimeframe = PERIOD_D1, InpLots = 0.10, InpMaxTrades = 1, InpSlippagePts = 40
- InpFastEMA = 25, InpTrendEMA = 200, InpADXPeriod = 14, InpADXMin = 20
- InpATRPeriod = 7, InpATRMultiplier = 1.0, InpRiskReward = 2.0

NOTABLE

Runs on Daily timeframe — very low trade frequency; simple, clean, no martingale/grid, sensible risk defaults.

Video: https://www.youtube.com/watch?v=_r-ktMcHqps | Source: <https://drive.google.com/file/d/1ttUNFcNfkdN5COCYZD83-3lH44fVuybk/view>

#06 SMC Liquidity Scalping

Grok AI

INDICATORS

`iMA` EMA(50)/EMA(200) trend filter; custom swing-high/low detection (no oscillators) to find liquidity sweep points over `SwingLookback=20` bars.

ENTRY LOGIC

Detects a "liquidity sweep": price wicks below/above a recent swing low/high then closes back above/below it, in the direction of the EMA50/EMA200 trend.

EXIT / RISK

SL placed beyond the sweep extreme + `SL_Buffer_Points` (150). TP = risk × `RiskRewardRatio` (2.0).

POSITION SIZING

Fixed lot (`LotSize=0.10`).

INPUTS (DEFAULTS)

- `EMA_Fast_Period = 50`, `EMA_Slow_Period = 200`, `EMA_Method = MODE_EMA`
- `LotSize = 0.10`, `MagicNumber = 123456789`, `MaxOpenTrades = 1`, `RiskRewardRatio = 2.0`,
`SL_Buffer_Points = 150.0`
- `SwingLookback = 20`, `MinSwingBars = 5`
- `UseTrendFilter = true`, `AllowBuy = true`, `AllowSell = true`

NOTABLE

Despite "Scalping" in title, uses `PERIOD_CURRENT` with per-bar evaluation — actual scalping behavior depends entirely on chart timeframe chosen by user; no explicit session/spread filter.

Video: <https://www.youtube.com/watch?v=shfLOHIWWR8> | Source: https://drive.google.com/file/d/1-MYgt5M9DExBio_tuaiociSIROpfUhHN/view

#07 SMC Trading Bot

GLM-Z AI

INDICATORS

iMA EMA(50)/EMA(100) trend filter; custom swing detection with configurable Left/Right bars
(InpSwing_LeftBars=5 , InpSwing_RightBars=25).

ENTRY LOGIC

Liquidity sweep of confirmed swing low/high (min sweep distance in points) with rejection close back inside the range, filtered by EMA50 vs EMA100 trend direction.

EXIT / RISK

SL beyond sweep wick + buffer (InpSL_Buffer_Points=200), TP = risk× InpRiskReward_Ratio (2.0), validated against broker min-stop-level.

POSITION SIZING

Fixed lot (InpLotSize=0.1).

INPUTS (DEFAULTS)

- InpFastEMA_Period = 50 , InpSlowEMA_Period = 100 , InpEMA_AppliedPrice = PRICE_CLOSE
- InpSwing_LeftBars = 5 , InpSwing_RightBars = 25 , InpMinSweep_Points = 15
- InpLotSize = 0.1 , InpMaxOpenTrades = 1 , InpMagicNumber = 20240101 , InpSlippage_Points = 40
- InpSL_Buffer_Points = 200 , InpRiskReward_Ratio = 2.0

NOTABLE

Swing search scans up to 500 bars back for the sweep bar — could be slow but functionally fine; skips first tick after init to avoid using incomplete history.

Video: <https://www.youtube.com/watch?v=VSvXW5ilM2s> | Source: https://drive.google.com/file/d/1iJZfGbzpJ-GTowa3zqPuajSmpqB_Sr8/view

#08 Smart Money SMC

Claude AI

INDICATORS

iMA EMA(50)/EMA(100), custom swing low/high scan (InpSwingLookback=5, InpSweepLookbackBars=25).

ENTRY LOGIC

Same liquidity-sweep family: sweep of last swing point + close back inside + trend bias from EMA50/100.
One-trade-per-bar gate; skips very first tick after start.

EXIT / RISK

SL = swept level $\pm$ InpSL_BufferPoints (70), floored at InpMinSLPoints (50) minimum distance; TP = risk $\times$ InpRiskRewardRatio (2.0).

POSITION SIZING

Fixed lot, broker-normalized.

INPUTS (DEFAULTS)

- InpMagicNumber = 20240601, InpMaxOpenTrades = 1, InpLotSize = 0.1
- InpFastEMAPeriod = 50, InpSlowEMAPeriod = 100, InpEMAPrice = PRICE_CLOSE
- InpSwingLookback = 5, InpSweepLookbackBars = 25, InpSweepBufferPoints = 0
- InpSL_BufferPoints = 70, InpRiskRewardRatio = 2.0, InpSlippagePoints = 20
- InpOneTradePerBar = true, InpMinSLPoints = 50

NOTABLE

Most careful/defensive of the three SMC clones (#06/07/08) — validates bar counts before running, explicit min-SL floor.

Video: <https://www.youtube.com/watch?v=Lnei321-DMQ> | Source: <https://drive.google.com/file/d/1wrR1gFWM1zp4OJ-Lf3wZrftnaY0gt9gf/view>

#09 Good Swing Trading

DeepSeek AI

INDICATORS

iMA EMA(20)/EMA(100), **iATR** (14). Uses candlestick pattern (bullish/bearish engulfing) + EMA slope + price-near-EMA20 (within $0.5 \times \text{ATR}$).

ENTRY LOGIC

Buy: $\text{EMA}_{20} > \text{EMA}_{50}$ & both sloping up & price near EMA20 & bullish engulfing candle. Sell mirrored.

EXIT / RISK

SL = $\text{ATR} \times \text{InpStopLossMultiplier}$ (2.0), TP = $\text{SL} \times \text{InpRiskRewardRatio}$ (2.0). No trailing stop.

POSITION SIZING

Fixed lot (**InpLotSize=0.01**).

RISK CONTROL

Consecutive-loss cooldown — after **InpMaxConsecutiveLosses** (2) losses in a row, EA pauses trading for **InpCooldownHours** (8).

INPUTS (DEFAULTS)

- InpMagicNumber** = 202601, **InpEmaFastPeriod** = 20, **InpEmaSlowPeriod** = 100, **InpAtrPeriod** = 14
- InpLotSize** = 0.01, **InpRiskRewardRatio** = 2.0, **InpStopLossMultiplier** = 2.0
- InpMaxOpenTrades** = 2, **InpMaxConsecutiveLosses** = 2, **InpCooldownHours** = 8

NOTABLE

Good example of adaptive risk control (loss-streak cooldown) — worth studying as a template for other bots that lack it.

Video: <https://www.youtube.com/watch?v=2Mcf3jBeaT8> | Source: https://drive.google.com/file/d/1_P3KY4iiCq03mJ7QymXFeCtneOKoFXj6/view

#10 EMA Trend Pullback

Gemini AI

INDICATORS

`iMA` EMA(20)/EMA(50)/EMA(200) triple stack; multiple confirmation candle patterns (Engulfing, Pin Bar, Strong Close) — user toggles which are active.

ENTRY LOGIC

Buy: EMA20>EMA50>EMA200 alignment, price pulled back to touch EMA20/50, bullish candle, and confirmed by whichever pattern(s) are enabled.

EXIT / RISK

Fixed pips SL/TP (`InpStopLossPips=20.0` , `TakeProfitPips=40.0`), adjusted $\times 10$ for 3/5-digit brokers.

POSITION SIZING

Dynamic — `InpUseDynamicLot=true` scales lot linearly with account balance (\$1000 $\rightarrow$ 0.1 lot, \$2000 $\rightarrow$ 0.2, etc.), else `InpFixedLotSize` .

INPUTS (DEFAULTS)

- `InpMagicNumber = 123456`
- `InpEMAFastPeriod = 20` , `InpEMAMidPeriod = 50` , `InpEMASlowPeriod = 200`
- `InpUseEngulfing = true` , `InpUsePinBar = false` , `InpUseStrongClose = false`
- `InpUseDynamicLot = true` , `InpFixedLotSize = 0.1` , `InpStopLossPips = 20.0` , `TakeProfitPips = 40.0`

NOTABLE

Dynamic lot sizing formula is aggressive (scales with balance, not risk %) — could produce oversized positions on larger accounts; no ATR-based SL despite claiming "trend pullback."

Video: <https://www.youtube.com/watch?v=9dUOyB5Gb-c> | Source: <https://drive.google.com/file/d/1CSi-huygFcIPercnkAr1YjJJlHPD56mi/view>

#11 Triple 3 EMA Trend Pullback

Claude AI

INDICATORS

`iMA` EMA(20)/EMA(50)/EMA(200), `iATR` (14). Same 3-pattern toggle system as #10 (Engulfing/Pin Bar/Strong Close) but combined with ATR-based flatness filter.

ENTRY LOGIC

Trend alignment ($\text{EMA}_{20} > \text{EMA}_{50} > \text{EMA}_{200}$ & $\text{close} > \text{EMA}_{200}$), pullback within ATR-scaled zone of $\text{EMA}_{20}/50$, bullish/bearish rejection candle pattern, and EMA_{200} must NOT be "flat" (slope filter using $\text{ATR} \times 0.1$ threshold).

EXIT / RISK

$\text{SL} = \text{ATR} \times \text{InpATR_SL_Mult}$ (1.5), $\text{TP} = \text{SL} \times \text{InpRR_Ratio}$ (3.0). Fixed lot.

INPUTS (DEFAULTS)

- `InpMagicNumber = 20260001`
- `InpEMA_Fast = 20`, `InpEMA_Mid = 50`, `InpEMA_Slow = 200`
- `InpATR_Period = 14`, `InpATR_SL_Mult = 1.5`, `InpRR_Ratio = 3.0`
- `InpUseEngulfing = false`, `InpUsePinBar = true`, `InpUseStrongClose = false`
- `InpPullbackPct = 0.50`, `InpUseFlatFilter = true`, `InpFlatATR_Mult = 0.1`
- `InpLotSize = 0.1`

NOTABLE

More rigorous than #10 (ATR-based SL/TP + flat-market filter); enforces at least one candle pattern be enabled at init.

Video: <https://www.youtube.com/watch?v=yelLdIGBp-U> | Source: <https://drive.google.com/file/d/1otp8grAqDWtO-OccXkHV5cnBAf2MFgze/view>

#12 Good EMA RSI Trading Bot

Gemini AI

INDICATORS

iMA EMA(100), iRSI (7).

ENTRY LOGIC

Buy: close>EMA100 AND RSI crosses up through 60 (from ≤ 60 to >60). Sell: close<EMA100 AND RSI crosses down through 40.

EXIT / RISK

Fixed points SL/TP (InpStopLossPoints=200 , InpTakeProfitPoints=600 = 1:3 RR).

POSITION SIZING

Fixed lot (InpLotSize=0.1).

INPUTS (DEFAULTS)

- InpEMAPeriod = 100 , InpRSIPeriod = 7 , InpRSIBuyLevel = 60.0 , InpRSISellLevel = 40.0
- InpLotSize = 0.1 , InpStopLossPoints = 200 , InpTakeProfitPoints = 600 , InpMagicNumber = 88123

NOTABLE

Very fast RSI(7) is prone to whipsaw; validated at init that Buy level must be >50 and Sell <50 .

Video: <https://www.youtube.com/watch?v=MM1zzocRoF4> | Source: <https://drive.google.com/file/d/1iGcriBkaPanhdFO2LGxtlXwAHNjSe3QX/view>

#13 Gold Pullback Continuation EA Claude AI

INDICATORS

iMA EMA(50)/EMA(100), iATR (14) with ATR-MA volatility filter (InpATRMAPeriod=20), iRSI (14, optional filter).

ENTRY LOGIC

Trend (close>EMA50>... slope up) + pullback zone (ATR-buffered around EMA50) + bullish/bearish engulfing confirmation, gated by session filter (London/NY hours) and spread filter.

EXIT / RISK

SL = ATR× InpATRMultiplier (1.5), TP = SL× InpRiskReward (2.5). Optional break-even move at InpBreakEvenTrigger (1.0×ATR).

POSITION SIZING

Fixed lot (InpFixedLot=0.01).

INPUTS (DEFAULTS)

- InpMagicNumber = 20240101
- InpFastEMA = 50, InpSlowEMA = 100, InpEMAPrice = PRICE_CLOSE
- InpATRPeriod = 14, InpATRMultiplier = 1.5, InpATRMAPeriod = 20, InpATRMinThreshold = 0.5
- InpUseRSI = false, InpRSIPeriod = 14, InpRSIBuyLevel = 51.0, InpRSISellLevel = 49.0
- InpRiskReward = 2.5, InpFixedLot = 0.01, InpMaxTrades = 1
- InpUseBreakEven = false, InpBreakEvenTrigger = 1.0
- InpPullbackATRBuffer = 0.2
- InpUseLondonSession = true, InpUseNewYorkSession = true, InpLondonOpenHour = 8, InpLondonCloseHour = 17, InpNewYorkOpenHour = 13, InpNewYorkCloseHour = 22
- InpMaxSpreadPoints = 30, InpSlippage = 30
- InpTimeframe = PERIOD_H1

NOTABLE

One of the more complete/professional designs — session filter, spread filter, volatility filter, break-even logic, OnTradeTransaction logging.

Video: <https://www.youtube.com/watch?v=To3K5zHeqEQ> | Source: <https://drive.google.com/file/d/1uinTkbfFFymN8ubujVuuFyjii7n14KTa/view>

#14 EMA Swing Trading Grok AI

INDICATORS

iMA EMA(30)/EMA(90), iATR (7).

ENTRY LOGIC

Trend (EMA30 vs EMA90) + optional slope check over SlopeBars (3) + price retracement near EMA30 (within 0.2%) + optional engulfing pattern.

EXIT / RISK

SL = ATR × ATR_Multiplier_SL (3.5), TP = SL × RR_Ratio (2.5). No trailing.

POSITION SIZING

Fixed lot (LotSize=0.1). Uses raw OrderSend / MqlTradeRequest instead of CTrade.

RISK CONTROL

Consecutive-loss pause similar to #09, but the pause-tracking logic (consecutiveLosses, pauseUntil) is declared but never actually updated on losing trades in this file (dead code) — the pause mechanism visible in the inputs isn't wired to OnTrade.

INPUTS (DEFAULTS)

- EMA_Fast_Period = 30, EMA_Slow_Period = 90, ATR_Period = 7, ATR_Multiplier_SL = 3.5, RR_Ratio = 2.5
- LotSize = 0.1, MaxOpenTrades = 1, MaxConsecutiveLosses = 2, PauseMinutes = 480
- UseEngulfing = true, CheckEMASlope = true, SlopeBars = 3

NOTABLE

Loss-cooldown inputs exist but are not functionally connected (never incremented) — a bug/incomplete feature if user expects it to work.

Video: https://www.youtube.com/watch?v=4Mz_9hTPEfE | Source: https://drive.google.com/file/d/10aZ3GD5AV45809QwbaosvOy7lV_zzMHj/view

#15 The Swing Trading Claude AI

INDICATORS

`iMA` EMA(25)/EMA(50), `iRSI` (14), `iATR` (14).

ENTRY LOGIC

Buy: EMA20>EMA50 & both sloping up, price pulled back to EMA20, bullish engulfing OR bullish rejection (long lower wick) candle, RSI crosses above 50. Sell mirrored (no RSI cross requirement noted, just RSI<50).

EXIT / RISK

SL = ATR× `InpATRMultiplier` (1.5), TP = SL× `InpRRRatio` (2.0).

POSITION SIZING

Fixed lot (`InpLotSize=0.1`).

RISK CONTROL

Consecutive-loss cooldown (`InpConsecLosses=2` → `InpCooldownHours=8`), tracked via `HistorySelect` / `HistoryDealGetTicket` — functionally wired (unlike #14).

INPUTS (DEFAULTS)

- `InpEMA20Period = 25`, `InpEMA50Period = 50`, `InpRSIPeriod = 14`, `InpATRPeriod = 14`
- `InpLotSize = 0.1`, `InpATRMultiplier = 1.5`, `InpRRRatio = 2.0`, `InpMaxOpenTrades = 2`
- `InpConsecLosses = 2`, `InpCooldownHours = 8`, `InpMagicNumber = 202601`

NOTABLE

Working cooldown mechanism (contrast with #14's broken one) — good candidate for backtesting the cooldown's actual effect on drawdown.

Video: https://www.youtube.com/watch?v=qRr_42zu2xQ | Source: https://drive.google.com/file/d/12FFPd71U_G2_LG9qWkubNH6vfET2Kbp/view

#16 The Swing Trade Grok AI

INDICATORS

iMA EMA(50) on H1, iRSI (14) on H1, iATR (14) on H1, iMA EMA(60) on H4 (higher-timeframe bias filter).

ENTRY LOGIC

H4 EMA60 bias (close vs EMA) gates direction; Buy needs pullback to EMA50 + bullish candle + RSI>45; Sell mirrored with RSI<55. Only EURUSD is allowed (OnInit checks symbol name).

EXIT / RISK

SL = ATR× ATR_Multiplier_SL (2.0) if UseATR_SL=true, else fixed pips; TP = risk× RR_Ratio (4.5). Positions in the "wrong" direction relative to H4 bias get force-closed. Trailing stop code present but commented out (// ManageTrailing();).

POSITION SIZING

Risk-based — CalculateLots() uses RiskPercent (1.0%) of balance divided by SL distance in ticks (only if UseRiskManagement=true), else fixed Lots .

RISK CONTROL

Crude news filter — blocks trading during hours 12,13,14,19 (hardcoded, not tied to an actual calendar).

INPUTS (DEFAULTS)

- Lots = 0.10 , UseRiskManagement = true , RiskPercent = 1.0 , MagicNumber = 20260513 , Slippage = 30
- EMA_Period = 50 , RSI_Period = 14 , RSI_Buy_Level = 45.0 , RSI_Sell_Level = 55.0
- HTF = PERIOD_H4 , HTF_EMA_Period = 60
- RR_Ratio = 4.5 , StopLossPips = 50 , UseATR_SL = true , ATR_Period = 14 , ATR_Multiplier_SL = 2.0
- TradeOnlyTrend = true , MinBars = 100 , AvoidNews = true

NOTABLE

Hardcoded to EURUSD only (will refuse to init on other symbols); "AvoidNews" filter is a fake/naive hour blacklist, not a real economic calendar; trailing-stop feature is disabled by commented-out code.

Video: <https://www.youtube.com/watch?v=REbz9AqS54M> | Source: <https://drive.google.com/file/d/1bzSB470YhGvCKP9Vrw8Gz59TGdRNVrWJ/view>

#17 Gold EMA SMA Trend Grok AI

INDICATORS

iMA EMA(20)/SMA(9), iATR (14).

ENTRY LOGIC

SMA crosses above/below EMA (crossover on last two closed bars) plus current-bar confirmation of direction.

EXIT / RISK

SL = ATR × SL_ATR_Multiplier (2.0), no fixed TP (runs open, relies on trailing). Trailing stop pegged to EMA ± ATR × Trail_ATR_Multiplier (1.0), only moves in favorable direction, freezes when price hasn't crossed EMA.

POSITION SIZING

Fixed lot (Lots=0.01).

INPUTS (DEFAULTS)

- Lots = 0.01, MagicNumber = 20250508, TradeComment = "EMA_SMA_XAU"
- EMA_Period = 20, SMA_Period = 9
- ATR_Period = 14, SL_ATR_Multiplier = 2.0, Trail_ATR_Multiplier = 1.0
- UseNewBarOnly = true, Slippage = 30

NOTABLE

No take-profit — fully trailing-stop-managed exit; designed for XAUUSD (Gold) but not symbol-restricted in code.

Video: <https://www.youtube.com/watch?v=2BVP1PprZ6A> | Source: https://drive.google.com/file/d/1TG__HVuOW8VB7TakCZy8WM27UsihHeLL/view

#18 EMA & SMA Crossover

Claude AI

INDICATORS

iMA EMA(9)/SMA(20), iATR (21).

ENTRY LOGIC

EMA9/SMA20 crossover on last closed bar, confirmed by close position vs SMA, optional SMA-slope filter.
"Emergency exit" closes existing position immediately if an opposite crossover occurs.

EXIT / RISK

SL = ATR × InpATRMultiplierSL (2.5), TP = SL × InpRiskRewardRatio (3.0). Spread filter blocks entries above InpMaxSpreadPoints (20).

POSITION SIZING

Fixed lot (InpLotSize=0.1).

INPUTS (DEFAULTS)

- InpEMAPeriod = 9, InpSMAPeriod = 20, InpPrice = PRICE_CLOSE
- InpLotSize = 0.1, InpATRPeriod = 21, InpATRMultiplierSL = 2.5, InpRiskRewardRatio = 3.0
- InpUseSlopeFilter = true, InpUseEmergencyExit = true, InpMaxSpreadPoints = 20
- InpMagicNumber = 99201, InpTradeComment = "EMA9_SMA20"

NOTABLE

Clean design with spread filter and emergency-exit-on-reversal — good candidate for backtesting.

Video: <https://www.youtube.com/watch?v=VcMuhnMppLo> | Source: <https://drive.google.com/file/d/1QXMZv8ayk-XgJbeqRXVMHDhm9RoIyY9m/view>

#19 Double RSI Bot

GLM-Z AI

INDICATORS

`iRSI` Fast(7)/Slow(50) — dual-timeframe-style confirmation on same H1 chart.

ENTRY LOGIC

Buy: both fast RSI(7) and slow RSI(50) below oversold(40), optional candle-close filter requires bullish candle. Sell mirrored with overbought(60).

EXIT / RISK

Fixed pips SL/TP (`InpStopLoss_Pips=30`, `InpTakeProfit_Pips=70`). Optional trailing stop (`InpUseTrailingStop=false` by default) with step logic.

POSITION SIZING

Fixed lot (`InpLotSize=0.1`).

INPUTS (DEFAULTS)

- `InpFastRSI_Period = 7`, `InpSlowRSI_Period = 50`, `InpRSI_Overbought = 60.0`, `InpRSI_Oversold = 40.0`
- `InpLotSize = 0.1`, `InpStopLoss_Pips = 30`, `InpTakeProfit_Pips = 70`
- `InpUseTrailingStop = false`, `InpTrailingStop_Pips = 20`, `InpTrailingStep_Pips = 5`
- `InpOneTradePerDir = false`, `InpUseCandleFilter = true`, `InpMagicNumber = 123456`

NOTABLE

Hardcoded to `PERIOD_H1` for both RSI handles regardless of chart timeframe attached.

Video: <https://www.youtube.com/watch?v=cHaU2mfP3jM> | Source: https://drive.google.com/file/d/12z4dcSUR-YuRKMHzsazvqgjm_AD07c-s/view

#20a RSI Grid Close-All

Claude AI

RISKY

INDICATORS

iRSI (14) only, on a hardcoded `InpSymbol` ("EURUSD")/ `InpTimeframe` (H1) rather than chart symbol.

ENTRY LOGIC

$RSI \leq 30 \rightarrow$ open Buy base order; $RSI \geq 70 \rightarrow$ open Sell base order (only if no position in that direction).

Grid adds continue in the same direction if price moves `InpGridSpacing` (30 pips) against the position, independent of RSI, up to `InpMaxGridTradesPerDirection` (8) / `InpMaxTotalTrades` (14).

EXIT / RISK

No per-trade SL/TP at all. Exit only via basket-level triggers: close-all when floating profit $\geq$

`InpCloseAllProfitAmount` (50) or $\geq$ `InpCloseAllProfitPercent` (0.5%) of balance; emergency close on equity drawdown (`InpEmergencyCloseDD=-300`), max unrealized loss (`InpMaxUnrealizedLoss=-500`), or max exposure (`InpMaxExposureValue=1000`).

POSITION SIZING

Fixed base lot (`InpBaseLot=0.01`) or optional martingale multiplier (`InpMartingale=false` , `InpLotIncreaseFactor=1.5`) per grid step.

INPUTS (DEFAULTS)

- `InpSymbol` = "EURUSD" , `InpTimeframe` = PERIOD_H1
- `InpBaseLot` = 0.01 , `InpGridSpacing` = 30.0 , `InpMaxGridTradesPerDirection` = 8 , `InpMaxTotalTrades` = 14 , `InpMinDistanceFromLastEntry` = 5.0
- `InpRSI_Period` = 14 , `InpRSI_Buy_Threshold` = 30 , `InpRSI_Sell_Threshold` = 70
- `InpEntryMode` = BIDIRECTIONAL (enum BUY_ONLY/SELL_ONLY/BIDIRECTIONAL)
- `InpCloseAllProfitAmount` = 50.0 , `InpCloseAllProfitPercent` = 0.5 , `InpUseProfitPercent` = true
- `InpMartingale` = false , `InpLotIncreaseFactor` = 1.5
- `InpEmergencyCloseDD` = -300.0 , `InpMaxExposureValue` = 1000.0 , `InpMinFreeMarginPct` = 10.0 , `InpMaxTimeOpenHours` = 0 , `InpMaxUnrealizedLoss` = -500.0
- `InpTradingStartTime` = "00:00" , `InpTradingEndTime` = "23:59"
- `InpCooldownMinutes` = 60 , `InpMagicNumber` = 20250101

NOTABLE

Classic no-stop-loss grid system — up to 14 simultaneous positions with no per-trade SL, relies entirely on basket-level DD/loss circuit breakers; grid without martingale is safer, but the martingale toggle is available and would compound risk fast if enabled; hardcodes trading symbol "EURUSD" independent of chart.

Video: <https://www.youtube.com/watch?v=rQU39Lu6ioI> | Source: <https://drive.google.com/file/d/1Bo5myR7SRDsW5Ug1vDbmWhQt5rKSeo8M/view>

#20b RSI Grid Close-All

GPT AI

RISKY

INDICATORS

iRSI (14).

ENTRY LOGIC

Same idea as #20a but simplified: $RSI \leq 30$ buy, ≥ 70 sell (only if no position of that type), and grid continuation adds when price moves `GridSpacing` (30) pips against existing position.

EXIT / RISK

No per-trade SL/TP. Closes all positions when total profit $\geq$ `CloseAllProfit` (50) or $\geq$ `CloseAllPercent` (0.5)% of balance, or on equity drawdown $\leq$ `EmergencyDD` (-300).

POSITION SIZING

`GetLot()` uses `MathPow(LotMultiplier, count)` if `UseMartingale=true` — true exponential martingale (steeper than #20a's simple $\times 1.5$ per step formula, which itself was linear-per-step not compounding on prior grid lot).

INPUTS (DEFAULTS)

- `InpSymbol = "EURUSD"`, `Timeframe = PERIOD_H1`
- `BaseLot = 0.01`, `GridSpacing = 30`, `MaxGridTradesPerDirection = 8`, `MaxTotalTrades = 14`
- `RSI_Period = 14`, `RSI_Buy_Level = 30`, `RSI_Sell_Level = 70`
- `CloseAllProfit = 50.0`, `CloseAllPercent = 0.5`
- `UseMartingale = false`, `LotMultiplier = 1.5`
- `EmergencyDD = -300.0`

NOTABLE

Simplified/rougher clone of #20a — same no-SL grid risk profile but with a genuine exponential martingale formula (`BaseLot  $\times$  Multipliercount`) if enabled, which compounds much faster than #20a's version; much less code/safety (no margin check, no session filter, no cooldown).

Video: <https://www.youtube.com/watch?v=rQU39Lu6ioI> | Source: <https://drive.google.com/file/d/1Bo5myR7SRDsW5Ug1vDbmWhQt5rKSeo8M/view>

#22 Support and Resistance Levels

GLM-Z AI

INDICATORS

iRSI (14); custom swing-based S/R detection (InpLookback=50 , InpSwingLeftRight=5) plus chart-drawn S/R lines and zones.

ENTRY LOGIC

Two modes: (1) Reversal — price touches support zone with RSI<30 and bullish reversal pattern (engulfing/pin bar) → buy; mirrored at resistance for sell. (2) Breakout — close breaks resistance/support, then EA waits up to InpBreakoutBars (5) bars for a retest with confirming candle before entering.

EXIT / RISK

Reversal trades: SL beyond level (InpRevStopLoss=20 pips or ATR-independent fixed), TP = risk× InpRevRiskReward (2.0). Breakout trades: SL beyond retest low/high (InpBreakStopLoss=15), TP = risk× InpBreakRiskReward (2.0).

POSITION SIZING

Fixed lot (InpLotSize=0.1).

INPUTS (DEFAULTS)

- InpLookback = 50 , InpZoneBuffer = 8 , InpUseSwingSR = true , InpSwingLeftRight = 5 , InpShowSRLines = true
- InpRSIPeriod = 14 , InpRSIOversold = 30 , InpRSIOverbought = 70
- InpUseEngulfing = true , InpUsePinBar = true , InpPinBarRatio = 2.0 , InpPinBarMaxBody = 0.3
- InpTradeReversal = true , InpRevStopLoss = 20.0 , InpRevTakeProfit = 0.0 , InpRevRiskReward = 2.0
- InpTradeBreakout = true , InpBreakoutBars = 5 , InpBreakStopLoss = 15.0 , InpBreakRiskReward = 2.0
- InpLotSize = 0.1 , InpMaxTrades = 1 , InpMagicNumber = 123456
- InpTradeComment = "SR_Strat" , InpSlippage = 10

NOTABLE

Most feature-rich S/R implementation in the set — draws live chart objects for support/resistance/zones and an info panel; both reversal and breakout modes active simultaneously by default (could produce conflicting signals near the same level).

Video: <https://www.youtube.com/watch?v=RUIld4YDgev4> | Source: https://drive.google.com/file/d/18JNCV_TGT1JBndZcu064C2OnOHvqbZpN/view

#23 Gold EMA+SMA Trend

Claude AI

INDICATORS

iMA SMA(9)/EMA(14) on H4, iATR (14) on H4.

ENTRY LOGIC

State-machine crossover: detects SMA/EMA cross → waits one bar for confirmation (still crossed) → enters on the following bar. No RSI/momentum filter.

EXIT / RISK

SL = ATR × InpSLMultiplier (2.0). No fixed TP; ATR/EMA-based trailing stop only moves when EMA is trending (not flat) and price makes new highs/lows.

POSITION SIZING

Fixed lot (InpLotSize=0.01).

INPUTS (DEFAULTS)

- InpLotSize = 0.01, InpSMAPeriod = 9, InpEMAPeriod = 14, InpATRPeriod = 14
- InpSLMultiplier = 2.0, InpTrailMultiplier = 1.0, InpMagicNumber = 123456

NOTABLE

Multi-state confirmation logic (wait-for-cross → wait-for-confirm → ready-to-enter → in-trade) reduces false signals but adds 1-2 bar entry lag; no take-profit (fully trail-managed), similar to #17.

Video: https://www.youtube.com/watch?v=39_tnZv8O2A | Source: <https://drive.google.com/file/d/1F9HQrapZliacV-stcbdix9tue4osJNoZ/view>

#24 MA Scalping Claude AI

INDICATORS

iMA EMA(8)/EMA(21)/EMA(50) triple, iRSI (14, optional filter).

ENTRY LOGIC

Buy: close>Trend EMA(50), Fast EMA(8)>Slow EMA(21), candle wicked into/retraced to Fast EMA and closed bullish above it, RSI<overbought(60). Sell mirrored.

EXIT / RISK

Fixed pips SL/TP (InpStopLoss=15.0 , InpTakeProfit=30.0). Optional break-even (InpUseBreakEven=true at 15 pips) and optional trailing stop (InpUseTrailing=false by default).

POSITION SIZING

Fixed lot (InpLotSize=0.1).

RISK CONTROL

Spread filter (max 2.0 pips) and session filter (07:00–20:00 server time).

INPUTS (DEFAULTS)

- InpFastEMA = 8 , InpSlowEMA = 21 , InpTrendEMA = 50 , InpMAMethod = MODE_EMA
- InpUseRSI = true , InpRSIPeriod = 14 , InpRSIOverbought = 60.0 , InpRSIOversold = 40.0
- InpLotSize = 0.1 , InpStopLoss = 15.0 , InpTakeProfit = 30.0
- InpUseBreakEven = true , InpBreakEvenPips = 15.0 , InpUseTrailing = false , InpTrailingPips = 6.0 , InpTrailingStep = 1.0
- InpUseSpreadFilter = true , InpMaxSpread = 2.0
- InpUseSessionFilter = true , InpSessionStartHour = 7 , InpSessionEndHour = 20
- InpMagicNumber = 20250409 , InpComment = "MA_Scalp"

NOTABLE

Designed and warned for EURUSD specifically (prints a warning if run elsewhere); has both session and spread filters, unusually complete for a "scalping" EA.

Video: <https://www.youtube.com/watch?v=JWRbXMdiGGo> | Source: https://drive.google.com/file/d/1s7PrGR6sbQDhriS3PF88I4ZceESTn_cJ/view

#25 Gold EMA+SMA Trend H4 GLM-Z AI

INDICATORS

iMA SMA(9)/EMA(14) on H4, iATR (14) on H4 — near-identical to #23.

ENTRY LOGIC

Same crossover confirmation state machine as #23 (wait-cross → confirm → enter).

EXIT / RISK

SL = ATR × InpSLMultiplier (2.0), trailing via EMA ± ATR × InpTrailMultiplier (1.0), freezes on flat EMA.
No TP.

POSITION SIZING

Fixed lot.

INPUTS (DEFAULTS)

- InpLotSize = 0.01, InpSMAPeriod = 9, InpEMAPeriod = 14, InpATRPeriod = 14
- InpSLMultiplier = 2.0, InpTrailMultiplier = 1.0, InpMagicNumber = 123456

NOTABLE

This is essentially a duplicate/near-clone of #23 (same logic, same defaults, different AI attribution) — good candidate to A/B backtest whether the two AI generations diverge at all in practice.

Video: https://www.youtube.com/watch?v=XV_Wnqehbwz | Source: <https://drive.google.com/file/d/1ON4X-c-CD9RnX7hsEJzdADgzhSImdWrP/view>

#26 Gold Trend Following

GLM-Z AI

INDICATORS

`iMA` EMA(8)/EMA(50)/EMA(100) triple stack, `iATR` (14), `iRSI` (14).

ENTRY LOGIC

Buy: uptrend structure (price>EMA100, EMA50>EMA100, EMA8>EMA50), price pullback/cross of EMA8 or near EMA50 (ATR-zone), RSI>51. Sell mirrored (RSI<49).

EXIT / RISK

SL = ATR× `InpSL_ATR_Mult` (1.5), TP = ATR× `InpTP_ATR_Mult` (2.5). Optional trailing stop (ATR× `InpTrail_ATR_Mult` =1.0) and break-even at `InpBreakEven_ATR` (1.0×R), both gated behind a manual `ManagePositions()` on new bar.

POSITION SIZING

Fixed lot (`InpLotSize=0.01`).

RISK CONTROL

Spread filter (`InpMaxSpreadPoints=50`).

INPUTS (DEFAULTS)

- `InpEMA_Fast = 8` , `InpEMA_Medium = 50` , `InpEMA_Slow = 100` , `InpATR_Period = 14` , `InpRSI_Period = 14`
- `InpRSI_Buy_Level = 51` , `InpRSI_Sell_Level = 49`
- `InpSL_ATR_Mult = 1.5` , `InpTP_ATR_Mult = 2.5`
- `InpUseTrailingStop = true` , `InpTrail_ATR_Mult = 1.0` , `InpUseBreakEven = true` , `InpBreakEven_ATR = 1.0`
- `InpLotSize = 0.01` , `InpMaxSpreadPoints = 50` , `InpMagicNumber = 123456`
- `InpTradeOnNewBar = true`

NOTABLE

Well-rounded gold trend-following bot with both TP and trailing/break-even active by default — no session filter though.

Video: <https://www.youtube.com/watch?v=Uv4pZ8w7vgc> | Source: https://drive.google.com/file/d/1_5VSEvIc8c9zPJSRemcH2BzfbuXB4ET5/view

#27a Gold Trend Following EMA Claude AI

INDICATORS

`iMA` EMA(8)/EMA(50)/EMA(100), `iRSI` (14). No ATR — uses "EMA cross zone" as a proximity measure derived from ATR? Actually uses ATR internally too via `EMA_CrossZone` multiplier concept but note: this file has no explicit ATR handle — check: actually re-reading, it does not create `handleATR`; it uses price-to-EMA proximity via `EMA_CrossZone` but that references `atr` variable that's undefined in context shown — the file structure mirrors #26 but is a distinct, slightly rougher rewrite without break-even flag persistence across restarts.

ENTRY LOGIC

Uptrend/downtrend structure check (price/EMA8/EMA50/EMA100 alignment) + pullback proximity to EMA20/50 zone + RSI confirmation (>51 buy, <49 sell).

EXIT / RISK

SL = ATR × `SL_ATR_Mult` (1.5), TP = ATR × `TP_ATR_Mult` (2.5). Break-even + trailing managed per-position via `ManageOpenTrades()`.

POSITION SIZING

Fixed lot (`LotSize=0.01`).

INPUTS (DEFAULTS)

- `EMA_Fast = 8`, `EMA_Mid = 50`, `EMA_Slow = 100`, `ATR_Period = 14`, `RSI_Period = 14`
- `RSI_BuyMin = 51.0`, `RSI_SellMax = 49.0`, `EMA_CrossZone = 1.0`
- `LotSize = 0.01`, `SL_ATR_Mult = 1.5`, `TP_ATR_Mult = 2.5`, `Trail_ATR_Mult = 1.0`, `BreakevenR = 1.0`
- `MagicNumber = 202501`, `TradeComment = "GoldTrend"`, `Slippage = 20`

NOTABLE

Break-even flags (`breakEvenApplied_Buy/Sell`) reset via `OnTradeTransaction` — cleaner state handling than #26.

Video: <https://www.youtube.com/watch?v=IAp1tS1trkQ> | Source: <https://drive.google.com/file/d/14lReJ-ZfmhdBgjld6-pb-hKh4-NVtAv-/view>

#27b Gold Trend Following EMA Grok AI

INDICATORS

`iMA` EMA(100)/EMA(50)/EMA(8) [note: labeled 200/50/20 in comments but actual periods are 100/50/8], `iATR` (14), `iRSI` (14).

ENTRY LOGIC

Same pullback+trend+RSI logic family as #26/27a: EMA8>EMA50>EMA100 & price>EMA100, pullback cross of EMA8 or EMA50, RSI>51/<49.

EXIT / RISK

SL=ATR× `ATR_SL_Multi` (1.5), TP=ATR× `ATR_TP_Multi` (2.5). Breakeven at 1R and ATR-based trailing (`ATR_Trail_Multi` =1.0), single-position-at-a-time (blocks new entries while one is open).

POSITION SIZING

Fixed lot (`LotSize=0.01`).

INPUTS (DEFAULTS)

- `EMA200_Period = 100` (misabeled comment — actually 100), `EMA50_Period = 50`, `EMA20_Period = 8` (misabeled — actually 8)
- `ATR_Period = 14`, `RSI_Period = 14`
- `ATR_SL_Multi = 1.5`, `ATR_TP_Multi = 2.5`, `ATR_Trail_Multi = 1.0`
- `LotSize = 0.01`, `MagicNumber = 20250324`, `OrderComment = "GoldTrendEA"`

NOTABLE

Input comment labels (EMA200/EMA50/EMA20) don't match actual default values (100/50/8) — cosmetic bug in the "Fixed by Grok AI" version; only allows 1 position at a time (`HasOpenPosition()`) blocks new entries entirely, unlike 26/27a which check per-direction).

Video: <https://www.youtube.com/watch?v=IAp1tS1trkQ> | Source: <https://drive.google.com/file/d/14lReJ-ZfmhdBgjld6-pb-hKh4-NVtAv-/view>

#28 Breakout Hybrid Strategy Grok AI

INDICATORS

`iMA` EMA(200) trend filter, `iRSI` (14), `iATR` (14). Uses `iHighest` / `iLowest` over `Range_Lookback` (12) bars (excluding breakout candle) for range breakout.

ENTRY LOGIC

Buy: $\text{close} > \text{EMA}_{200}$, close breaks above the prior 12-bar high, $\text{RSI} > 51$. Sell: $\text{close} < \text{EMA}_{200}$, close breaks below prior 12-bar low, $\text{RSI} < 49$. Netting mode — closes opposite position before opening new one.

EXIT / RISK

$\text{SL} = \text{ATR} \times \text{SL_Multiplier}$ (1.5), $\text{TP} = \text{risk} \times \text{RR_Ratio}$ (2.0).

POSITION SIZING

Fixed lot (`LotSize=0.01`).

INPUTS (DEFAULTS)

- `EMA_Period = 200`, `ATR_Period = 14`, `RSI_Period = 14`, `Range_Lookback = 12`
- `RSI_Buy_Level = 51.0`, `RSI_Sell_Level = 49.0`
- `SL_Multiplier = 1.5`, `RR_Ratio = 2.0`, `LotSize = 0.01`
- `MagicNumber = 123456789`, `Slippage = 30`, `UseTrailing = false` (declared but unused — "future extension")

NOTABLE

Simple, clean breakout logic; `UseTrailing` input exists but is explicitly a no-op placeholder ("not used in v1.00") — cosmetic unused setting.

Video: <https://www.youtube.com/watch?v=MhiSuf79oMk> | Source: <https://drive.google.com/file/d/1bxjIC1ycigjDomGPU7buRV8Qj7i8E024/view>

INDICATORS

iMA EMA(200) on H1, iRSI (14) on H1.

ENTRY LOGIC

Buy: price>EMA200 (uptrend) AND RSI was recently in the 40–45 "buy pullback zone" and is now turning up (rsi[1]>rsi[2]). Sell: price<EMA200 AND RSI was in 55–60 zone and turning down.

EXIT / RISK

Fixed pips SL/TP scaled for gold (InpStopLossPips=150.0 →15 "gold pips", InpTakeProfitPips=300.0 , 1:2 RR). Trailing stop (InpTrailingPips=100.0) always active if enabled.

POSITION SIZING

Optional risk-% based (InpUseRiskPercent=false by default, InpRiskPercent=1.5) or fixed lot.

INPUTS (DEFAULTS)

- InpEMA_Period = 200 , InpRSI_Period = 14
- InpRSI_BuyZoneLow = 40.0 , InpRSI_BuyZoneHigh = 45.0 , InpRSI_SellZoneLow = 55.0 , InpRSI_SellZoneHigh = 60.0
- InpLotSize = 0.01 , InpRiskPercent = 1.5 , InpUseRiskPercent = false
- InpStopLossPips = 150.0 , InpTakeProfitPips = 300.0
- InpUseTrailingStop = true , InpTrailingPips = 100.0 , InpMaxOpenTrades = 2
- InpMagicNumber = 20250101 , InpComment = "GoldEMA_RSI" , InpAlertOnSignal = true , InpPrintLogs = true

NOTABLE

Designed for XAUUSD/H1 specifically (warns if run elsewhere); has both risk-% and fixed-lot sizing modes.

Video: <https://www.youtube.com/watch?v=WPMq-fYF4Uw> | Source: <https://drive.google.com/file/d/1es3hvxIHqqFwvRhfxhM5FkBcuYxNq4aO/view>

#30 Triple EMA Momentum Qwen AI

INDICATORS

`iMA` EMA(8 fast)/EMA(12 value)/EMA(100 trend), `iRSI` (14).

ENTRY LOGIC

"Golden zone" pullback concept: trend via EMA100, EMA8 vs EMA12 relationship, price dips into the zone between the two fast EMAs and recovers, confirmed by $RSI > 55$ (buy) / < 45 (sell), no explicit candle-shape requirement (simpler than #31/32/33 variants).

EXIT / RISK

SL = 50-EMA (EMA_Value) $\pm$ `InpSL_Pips` (20) buffer; TP = risk $\times$ 2.0 (hardcoded RR inside `CalculateTP`, not an input). Optional trailing/breakeven at 1:1 RR (`InpUseTrailing=true`).

POSITION SIZING

Fixed lot (`InpLotSize=0.1`).

INPUTS (DEFAULTS)

- `InpEMA_Fast = 8`, `InpEMA_Value = 12`, `InpEMA_Trend = 100`, `InpRSI_Period = 14`
- `InpRSI_BuyLevel = 55`, `InpRSI_SellLevel = 45`
- `InpLotSize = 0.1`, `InpSL_Pips = 20`, `InpUseTrailing = true`, `InpMagicNumber = 888999`

NOTABLE

Take-profit RR ratio (2.0) is hardcoded inside `CalculateTP()`, not exposed as an input — can't be tuned via the Strategy Tester optimizer without code edit.

Video: <https://www.youtube.com/watch?v=w-52ho3QX8M> | Source: https://drive.google.com/file/d/1kiLT1CfUdpHVoEoCJ_-NjIKPqZeT87z_/view

#31 Triple EMA Momentum Claude AI

INDICATORS

`iMA` EMA(20 fast)/EMA(50 mid)/EMA(200 slow), `iRSI` (14).

ENTRY LOGIC

"Golden Zone" pullback (price between EMA20 and EMA50), trend from EMA200, hammer/shooting-star candle confirmation, $RSI > 55$ (buy)/ < 45 (sell).

EXIT / RISK

SL = $\min(\text{midEMA}, \text{swing low}) - \text{SL_Pips}(20)$, or $\max(\text{midEMA}, \text{swing high}) + \text{SL_Pips}$ for sell; TP = $\text{risk} \times \text{RR_Ratio}(2.0)$. Breakeven move at 1:1 RR (`UseBreakeven=true`).

POSITION SIZING

Fixed lot (`LotSize=0.1`).

INPUTS (DEFAULTS)

- `EMA_Fast = 20`, `EMA_Mid = 50`, `EMA_Slow = 200`
- `RSI_Period = 14`, `RSI_BullLevel = 55.0`, `RSI_BearLevel = 45.0`
- `LotSize = 0.1`, `SL_Pips = 20.0`, `RR_Ratio = 2.0`, `UseBreakeven = true`, `InitialBalance = 1000.0`
(display-only, no functional effect)
- `HammerRatio = 2.0`, `ZoneTolerance = 0.5`
- `MagicNumber = 202500`, `TradeComment = "TripleEMA"`, `EnableBuy = true`, `EnableSell = true`

NOTABLE

`InitialBalance` input is purely cosmetic/documentation, has zero effect on lot sizing (misleading name); good hammer/shooting-star pattern detection.

Video: <https://www.youtube.com/watch?v=VoLA7HVVYZc> | Source: <https://drive.google.com/file/d/1IramUVY-onLWOdWNWsKLL-h5DGJx3BZV/view>

#32 Triple EMA Momentum Kimi AI

INDICATORS

`iMA` EMA(20)/EMA(50)/EMA(200), `iRSI` (14).

ENTRY LOGIC

Same golden-zone/pullback family (trend, EMA20-50 alignment, "in zone" check, bullish/bearish rejection or plain directional candle, RSI>50 confirmation using single `InpRSILevel`=50 for both directions rather than separate buy/sell thresholds).

EXIT / RISK

SL = min(swing low over 3 bars, EMA50) - `InpSlPips` (20); TP = risk× `InpRiskReward` (2.0). Breakeven at `InpBreakevenRR` (1.0) if `InpUseTrailing=true`.

POSITION SIZING

Fixed lot (`InpLotSize=0.1`). Uses raw `MqlTradeRequest` / `OrderSend`.

INPUTS (DEFAULTS)

- `InpEMA20Period` = 20, `InpEMA50Period` = 50, `InpEMA200Period` = 200, `InpRSIPeriod` = 14, `InpRSILevel` = 50
- `InpSlPips` = 20, `InpRiskReward` = 2.0, `InpUseTrailing` = true, `InpBreakevenRR` = 1.0
- `InpLotSize` = 0.1, `InpMagicNumber` = 123456, `InpSlippage` = 30, `InpMaxSpread` = 50

NOTABLE

Only one Triple-EMA variant (of #30/31/32/33) that logs verbose per-bar debug info (`Print()` of all condition booleans) — noisy in live logs but useful for manual verification/backtesting analysis.

Video: <https://www.youtube.com/watch?v=miyXKctWaNY> | Source: <https://drive.google.com/file/d/1Y7hOSLfc-uBFQioeSis79ZAgWuGkOWj8/view>

#33 Trend Following Pullback Kimi AI

INDICATORS

`iMA` EMA(100 "fast")/EMA(200 "slow") [labels reversed vs values — comment says "EMA 50" but default is 100], `iRSI` (14).

ENTRY LOGIC

Trend from EMA100 vs EMA200 + slope of EMA100; pullback distance to EMA100 within `InpPullbackDistance` (10 points); RSI<50 (buy) / >50 (sell); optional engulfing or strong-close confirmation.

EXIT / RISK

Fixed pips SL/TP (`InpStopLossPips=20.0` , `InpTakeProfitPips=40.0` , adjusted ×10 for point conversion). Optional trailing stop declared (`InpUseTrailingStop=false`) but `OnTradeTransaction` trailing logic is an empty stub — not implemented.

POSITION SIZING

Optional risk-% (`InpUseMoneyManagement=false` default, `InpRiskPercent=1.0`) or fixed lot.

RISK CONTROL

Optional London-session-only filter (disabled by default).

INPUTS (DEFAULTS)

- `InpEMAFastPeriod = 100` , `InpEMASlowPeriod = 200` , `InpEMAPrice = PRICE_CLOSE`
- `InpRSIPeriod = 14` , `InpRSIBuyLevel = 50.0` , `InpRSISellLevel = 50.0`
- `InpPullbackDistance = 10.0` , `InpUseEngulfing = true` , `InpUseStrongClose = true`
- `InpStopLossPips = 20.0` , `InpTakeProfitPips = 40.0` , `InpUseTrailingStop = false`
- `InpLotSize = 0.1` , `InpMaxTrades = 1` , `InpUseMoneyManagement = false` , `InpRiskPercent = 1.0`
- `InpUseLondonSession = false` , `InpLondonStartHour = 8` , `InpLondonEndHour = 17`
- `InpMagicNumber = 123456` , `InpTradeComment = "TrendPullback"` , `InpSlippage = 30`

NOTABLE

`InpUseTrailingStop` input has zero implementation (the `OnTradeTransaction` handler is an empty comment placeholder) — trailing will never actually happen no matter the setting.

Video: https://www.youtube.com/watch?v=xssEA7Eq2_4 | Source: https://drive.google.com/file/d/1nVADDg_z3AuFoas3ni_R17R2eC3l3S9r/view

#34 Advance Grid

Kimi AI

RISKY

INDICATORS

`iMA` EMA(100)/EMA(200), `iRSI` (14), `iATR` (14) — used purely as a grid-spacing/volatility filter, not classic entry timing.

ENTRY LOGIC

Activates a directional grid when `EMA100 > EMA200` & `price > EMA100` & `RSI > 55` (buy) or mirrored bearish (sell), provided `ATR` (in points) exceeds `InpMinATR` (100). Once active, adds grid levels every `atr × InpATRMultiplier` (0.8) of adverse movement, up to `InpMaxTrades` (6) per direction.

EXIT / RISK

Basket TP as % of balance (`InpBasketTPPercent=2.0`) via `InpUseBasketTP=true`, else per-order TP = grid step × `InpPerOrderTP_ATR` (1.0). Hard "stop-loss" = closes entire grid when price moves beyond `InpMaxGridDistance_ATR` (6.0) × grid step from the weighted-average entry. Equity-drawdown circuit breaker (`InpMaxDrawdown=25%`) disables trading for `InpDisableHours` (24) after trigger.

POSITION SIZING

Fixed lot per grid level, or optional multiplier (`InpUseMultiplier=false`, `InpMultiplier=1.3`) applied to the largest current lot in the grid — mild martingale-style scaling if enabled. Also has an alternate `InpLotPer1000` (0.01) balance-scaling mode.

RISK CONTROL

Session filter (`InpUseSessionFilter=true`, 08:00–22:00 server time).

INPUTS (DEFAULTS)

- `InpLotSize = 0.01`, `InpUseMultiplier = false`, `InpMultiplier = 1.3`, `InpLotPer1000 = 0.01`
- `InpEMAFast = 100`, `InpEMASlow = 200`, `InpRSIPeriod = 14`, `InpRSIBuyLevel = 55.0`, `InpRSISellLevel = 45.0`
- `InpATRPeriod = 14`, `InpATRMultiplier = 0.8`, `InpMinATR = 100.0`
- `InpMaxTrades = 6`, `InpUseBasketTP = true`, `InpBasketTPPercent = 2.0`, `InpPerOrderTP_ATR = 1.0`
- `InpMaxDrawdown = 25.0`, `InpDisableAfterDD = true`, `InpDisableHours = 24`, `InpUseHardSL = true`, `InpMaxGridDistance_ATR = 6.0`
- `InpUseSessionFilter = true`, `InpStartHour = 8`, `InpEndHour = 22`
- `InpMagicNumber = 123456`, `InpComment = "XAUUSD Grid"`, `InpSlippage = 30`

NOTABLE

Grid strategy with no per-trade SL by design (relies on "hard SL" at grid-distance level, i.e., after already being 6 levels deep) — meaningful adverse-move exposure before the circuit breaker fires; multiplier off by default is the safer configuration, but multiplier mode exists and compounds on the largest existing lot (soft martingale).

Video: <https://www.youtube.com/watch?v=gao0CHSYm3M> | Source: https://drive.google.com/file/d/17Y52aH8j1yi5lc-xHX5cYYlw1_cUYwOA/view

#35 Gold Trend Grid Bot

Claude AI

RISKY

INDICATORS

iMA EMA(100)/EMA(200) on H1, iRSI (14) on H1, iATR (14) on H1 — near-identical strategy design to #34, same "Adaptive Trend Grid" concept, different code style (raw OrderSend vs #34's CTrade).

ENTRY LOGIC

Buy: EMA50>EMA200(labelled Fast/Slow=100/200), price>EMA_Fast, RSI>55, ATR above min threshold. Sell mirrored. Grid continuation adds every ATR× InpATRMultiplier (0.8) of adverse move up to InpMaxTrades (6) per direction.

EXIT / RISK

Basket TP (InpBasketTPPercent=1.0 % of account) or per-order TP (ATR× InpPerOrderTPMultiplier=1.0). Equity protection closes all and disables trading for 24h at InpMaxDrawdownPercent (20%) drawdown. No explicit hard-SL-by-distance mechanism (unlike #34) beyond the equity protection.

POSITION SIZING

Fixed lot with optional exponential multiplier (InpUseMultiplier=false , InpMultiplier=1.3 , applied as MathPow(InpMultiplier, positionIndex) — true compounding martingale if enabled, stronger than #34's "largest lot × multiplier" approach).

RISK CONTROL

Session filter (InpSessionStartHour=8 to InpSessionEndHour=22 GMT).

INPUTS (DEFAULTS)

- InpLotSize = 0.01 , InpUseMultiplier = false , InpMultiplier = 1.3
- InpEMAFast = 100 , InpEMASlow = 200 , InpRSIPeriod = 14 , InpRSIBuyLevel = 55 , InpRSISellLevel = 45
- InpATRPeriod = 14 , InpATRMultiplier = 0.8 , InpMaxTrades = 6 , InpMinATR = 50
- InpUseBasketTP = true , InpBasketTPPercent = 1.0 , InpPerOrderTPMultiplier = 1.0
- InpUseEquityProtection = true , InpMaxDrawdownPercent = 20.0
- InpUseSessionFilter = true , InpSessionStartHour = 8 , InpSessionEndHour = 22
- InpMagicNumber = 20260212 , InpTradeComment = "XAUUSD_Grid"

NOTABLE

Same grid family as #34 but lacks the grid-distance hard-SL feature #34 has — relies purely on 20% equity-drawdown circuit breaker, meaning positions can run further underwater before any protective action; martingale multiplier, if enabled, compounds exponentially (Multiplier^index) rather than linearly.

Video: https://www.youtube.com/watch?v=MyvHk-xKo_g | Source: https://drive.google.com/file/d/1q5tHSighkWG_9tfJykUUBGaWsobjgdEs/view

#36 Grid Bot

Kimi AI

RISKY

INDICATORS

None (pure price-action grid, no technical indicators at all).

ENTRY LOGIC

No signal filter — simply opens a Buy and/or Sell (per `Trade_Direction` setting) as soon as there are no open trades, then grids in both directions independent of any market condition.

EXIT / RISK

No per-trade SL/TP whatsoever. Exits only when total floating profit $\geq$ `Profit_Target` (\$20) — closes everything and (if `Restart_After_Close=true`) immediately restarts a new cycle. Optional equity-stop (`Use_Equity_Stop=false` default) at `Equity_Stop_Percent` (50%) drawdown from cycle-start equity.

POSITION SIZING

`Lot_Multiplier` (1.0 default = flat, no martingale) applied via `MathPow(Lot_Multiplier, orderNumber-1)` — becomes full martingale if multiplier is raised above 1.0. Grid step fixed at `Grid_Step` (30 pips).

INPUTS (DEFAULTS)

- `Initial_Lot = 0.01`, `Lot_Multiplier = 1.0`, `Grid_Step = 30`, `Max_Orders = 10`, `MagicNumber = 12345`
- `Profit_Target = 20.0`, `Use_Equity_Stop = false`, `Equity_Stop_Percent = 50.0`, `Restart_After_Close = true`
- `Trade_Direction = DIRECTION_BOTH` (enum BUY/SELL/BOTH)
- `Slippage = 30`

NOTABLE

Highest-risk grid in the set — no indicator/signal filter at all (pure grid), no SL, both directions active simultaneously by default (hedged double grid), auto-restarts perpetually after each profit target hit; if `Lot_Multiplier` is raised this becomes unbounded martingale with a 50% equity stop as the only backstop, and even that is disabled by default.

Video: <https://www.youtube.com/watch?v=9CMF-mBdsns> | Source: <https://drive.google.com/file/d/1cb3E6D2uiCsiDd5U4z2yJEF4FzeTpNKS/view>

#37 BB Volatility Kimi AI

INDICATORS

iBands (Bollinger Bands, 20, dev 2.0), optional **iATR** (14) confirmation, optional **iRSI** (14) confirmation.

ENTRY LOGIC

Requires a detected "Bollinger squeeze" (current bandwidth near the minimum over **SqueezeLookback** = 20 bars, i.e., $\text{currentBandwidth} \leq \text{minBandwidth} \times 1.1$) as a gate, then Buy when previous close > upper band (breakout), optionally confirmed by rising ATR and $\text{RSI} > 55$; Sell mirrored on lower-band breakout with $\text{RSI} < 45$.

EXIT / RISK

Fixed points SL/TP (**StopLossPoints**=300, **TakeProfitPoints**=600), or optional SL = opposite Bollinger Band $\pm$ buffer (**UseOppositeBandSL**=true, **OppositeBandBuffer**=150 points).

POSITION SIZING

Fixed lot (**LotSize**=0.1).

INPUTS (DEFAULTS)

- **MagicNumber** = 123456, **LotSize** = 0.1, **Slippage** = 30, **MaxPositions** = 1
- **StopLossPoints** = 300, **TakeProfitPoints** = 600, **UseOppositeBandSL** = true
- **BBPeriod** = 20, **BBDeviation** = 2.0, **BBShift** = 0, **SqueezeLookback** = 20, **SqueezeThreshold** = 0.0
- **UseATRFilter** = false, **ATRPeriod** = 14, **ATRShift** = 0
- **UseRSIFilter** = false, **RSIPeriod** = 14, **RSIShift** = 0, **RSIBuyLevel** = 55, **RSISellLevel** = 45
- **OppositeBandBuffer** = 150

NOTABLE

Classic squeeze-then-breakout volatility strategy — reasonable and distinct from the trend/momentum majority of this collection; both ATR and RSI filters off by default (pure BB-squeeze breakout).

Video: <https://www.youtube.com/watch?v=DgEPozm-5X8> | Source: https://drive.google.com/file/d/1ddIt_usDQoRdesKNPyZ2Q3WtzZDphgKN/view?usp=sharing

#38 One Candle Bot

Claude AI

INDICATORS

Optional `iRSI` (14) filter only; primary signal is pure candlestick pattern recognition (Bullish/Bearish Engulfing, Bullish/Bearish Pin Bar).

ENTRY LOGIC

Two-stage: (1) On a completed candle, detect a bullish or bearish reversal pattern (optionally filtered by RSI oversold<30/overbought>70); (2) Wait for a subsequent candle's close to break beyond the signal candle's high (buy) or low (sell) before actually entering — i.e., breakout-of-signal-candle confirmation, not immediate entry.

EXIT / RISK

Fixed pips SL/TP (`InpStopLoss=20`, `InpTakeProfit=40`, ×10 point conversion).

POSITION SIZING

Fixed lot (`InpLotSize=0.1`).

INPUTS (DEFAULTS)

- `InpLotSize = 0.1`, `InpStopLoss = 20`, `InpTakeProfit = 40`, `InpMagicNumber = 123456`
- `InpUseBullishEngulfing = true`, `InpUseBullishPinBar = true`, `InpUseBearishEngulfing = true`, `InpUseBearishPinBar = true`
- `InpUseRSIFilter = false`, `InpRSIPeriod = 14`, `InpRSIOversold = 30`, `InpRSIOverbought = 70`
- `InpPinBarRatio = 1.5`, `InpSlippage = 10`

NOTABLE

Distinctive "wait for breakout of the signal candle's extreme" entry trigger, rather than entering immediately on pattern detection — reduces false signals but delays entries; no trend filter of any kind (pure price-action reversal bot), which could fire pattern signals against a strong trend.

Video: <https://www.youtube.com/watch?v=ZEzMsoSGfbQ> | Source: https://drive.google.com/file/d/1tkzHjIigwruTUrHkYN9BVaiFoWCf5rq_/view

#39 3 EMA Pullback

Claude AI

INDICATORS

iMA EMA(9)/EMA(21)/EMA(55) on H1, iMA EMA(21)/EMA(89) on H4, iRSI (14) on H1.

ENTRY LOGIC

H4 EMA21>EMA89 bullish bias required; H1 EMA9 crosses above EMA21 while EMA9<EMA55 (pullback context); RSI>60 confirmation. Sell is the mirror (H4 bearish bias, EMA9 crosses below EMA21 while EMA9>EMA55, RSI<40).

EXIT / RISK

Fixed pips SL/TP (StopLoss=20.0 , TakeProfit=40.0 , ×10 conversion).

POSITION SIZING

Fixed lot (LotSize=0.1).

INPUTS (DEFAULTS)

- TF_H1 = PERIOD_H1 , TF_H4 = PERIOD_H4
- EMA_Fast_H1 = 9 , EMA_Medium_H1 = 21 , EMA_Slow_H1 = 55
- EMA_Fast_H4 = 21 , EMA_Slow_H4 = 89
- RSI_Period = 14 , RSI_Buy_Level = 60 , RSI_Sell_Level = 40
- TakeProfit = 40.0 , StopLoss = 20.0 , LotSize = 0.1
- MagicNumber = 123456 , TradeComment = "3EMA_Pullback"

NOTABLE

Only checks `PositionSelect(_Symbol)` (any position on symbol, not filtered by magic) before allowing a new trade — could conflict/interact incorrectly with other EAs or manual positions on the same symbol.

Video: <https://www.youtube.com/watch?v=OclHmpQQVRg> | Source: https://drive.google.com/file/d/1QZuG_sax506qEoIEW9Bw72TWWOd8n5vK/view?usp=sharing

#40 Support & Resistance Gemini AI

INDICATORS

None — pure price-structure breakout using `iHighest` / `iLowest` over `InpLookback` (30) bars.

ENTRY LOGIC

Buy when current Ask > recent N-bar high (resistance); Sell when Bid < recent N-bar low (support).

Extremely minimal — no trend/momentum filter, no candle confirmation.

EXIT / RISK

Fixed points SL/TP (`InpStopLoss=200` , `InpTakeProfit=800` = 1:4 RR).

POSITION SIZING

Fixed lot (`InpLotSize=0.1`).

INPUTS (DEFAULTS)

- `InpLookback = 30` , `InpLotSize = 0.1` , `InpStopLoss = 200` , `InpTakeProfit = 800` , `InpMagicNumber = 123456`

NOTABLE

By far the simplest/shortest EA in the whole set (~80 lines) — pure breakout with no filters at all, no new-bar gating (evaluates on every tick), which could fire repeatedly intrabar until a position exists to block it.

Video: <https://www.youtube.com/watch?v=4irAmpoR5nw> | Source: https://drive.google.com/file/d/152DdW3HV2ck-PrpY_HSJDjjs_KYS-6oX/view?usp=sharing

#41 Support & Resistance Claude AI

INDICATORS

None directly for entries beyond structural swing-high/low detection (`InpMinBarsBetween=20`) clustering into discrete S/R levels validated by `InpTouchStrength` (3) touches.

ENTRY LOGIC

Two modes: Bounce (price touches a validated S/R level with a rejecting candle) and Breakout (close breaks beyond a level by `InpBreakoutPips` (10) with prior bar inside it).

EXIT / RISK

Fixed pips SL/TP (`InpStopLossPips=50` , `InpTakeProfitPips=100`). Optional trailing stop (`InpUseTrailingStop=true` , `InpTrailingStopPips=30` , step 10).

POSITION SIZING

Optional risk-% (`InpRiskPercent=0`) disables it by default → uses fixed lot `InpLotSize=0.05`).

INPUTS (DEFAULTS)

- `InpLookbackBars = 100` , `InpTouchStrength = 3` , `InpLevelThreshold = 0.0005` , `InpMinBarsBetween = 20`
- `InpTimeframe = PERIOD_H1` , `InpTradeBounce = true` , `InpTradeBreakout = true` , `InpBreakoutPips = 10`
- `InpLotSize = 0.05` , `InpStopLossPips = 50` , `InpTakeProfitPips = 100` , `InpMaxTrades = 2` , `InpRiskPercent = 0`
- `InpUseTrailingStop = true` , `InpTrailingStopPips = 30` , `InpTrailingStepPips = 10` , `InpMagicNumber = 123456`

NOTABLE

More rigorous S/R validation than #40 (requires N touches to confirm a level, clusters nearby levels together) — a meaningfully different/better implementation of the same "Support & Resistance" concept as #40, worth comparing head-to-head in backtests.

Video: <https://www.youtube.com/watch?v=V4-a8qIQb8E> | Source: <https://drive.google.com/file/d/1C1tsxeZzgi4O7nQ5-Uz9I32O9rdvdcfd/view?usp=sharing>

#42 3 EMA Pullback with Higher [Timeframe]

Gemini AI

RISKY

INDICATORS

iMA EMA(9)/EMA(21)/EMA(55) on current TF, iMA EMA(21)/EMA(89) on H4 (InpHTF), iRSI (14).

ENTRY LOGIC

H4 EMA21>EMA89 bullish bias, H1 EMA9 crosses above EMA21, EMA9<EMA55 (pullback), RSI(14)>60 → buy. Sell is the mirror (bearish H4 bias, cross down, EMA9>EMA55, RSI<40).

EXIT / RISK

Fixed points SL/TP (InpSL=200 , InpTP=400 , points not pips).

POSITION SIZING

GetMartingaleLot() scans trade history: if the last closed deal (this magic+symbol) was a loss, next lot = last losing trade's volume × InpMultiplier (2.0), capped at InpMaxLot (5.0) and reset after InpMaxSteps (5) consecutive losses or any win.

INPUTS (DEFAULTS)

- InpEMA9 = 9 , InpEMA21 = 21 , InpEMA55 = 55
- InpHTF = PERIOD_H4 , InpEMA21_H4 = 21 , InpEMA89_H4 = 89
- InpRSI_Period = 14 , InpRSI_Buy = 60 , InpRSI_Sell = 40
- InpInitialLot = 0.1 , InpTP = 400 , InpSL = 200 , InpMagic = 123456
- InpMultiplier = 2.0 , InpMaxLot = 5.0 , InpMaxSteps = 5

NOTABLE

This is a real martingale (doubles the lot after every loss, capped at 5.0 lots and 5 consecutive steps) disguised under a "3 EMA Pullback with Higher [Timeframe]" filename that gives no hint of the martingale behavior — important to flag since the name alone would not suggest doubling-down risk; each entry does carry a real 1:2 SL/TP (200/400 points) unlike the true no-SL grids (#20, #34-36), so the martingale compounding is at least bounded per trade, but 5 consecutive losing doublings from 0.1 lot reaches close to the 5.0 lot cap.

Video: https://www.youtube.com/watch?v=QkJrL_X8sQo | Source: https://drive.google.com/file/d/1KosP1wJKK1D9GgKJESlDoUc_HgWiXXXJ/view

INDICATORS

iMA EMA(8)/EMA(21)/EMA(55) trend-alignment filter (optional, `useTrendFilter=true`).

ENTRY LOGIC

No directional signal at all — opens a base Buy AND a base Sell simultaneously (hedged) whenever the EMA8/21/55 stack is aligned in either direction. The filter only checks that the three EMAs are stacked in *some* order (bullish or bearish), not which direction, so both sides can open even in a one-directional trend.

EXIT / RISK

Fixed pips SL/TP per order (`stopLoss=1500` points = 150 pips, `takeProfit=150` points = 15 pips) — a asymmetric 1:0.1 reward:risk per trade, relying entirely on grid averaging rather than per-trade edge.

POSITION SIZING

Fixed lot per grid level (`lotSize=0.01`), no martingale multiplier — flat exposure per level.

INPUTS (DEFAULTS)

- `lotSize = 0.01`
- `gridSpacing = 400` // 40 pips (points)
- `takeProfit = 150` // 15 pips
- `stopLoss = 1500` // 150 pips
- `maxTradesPerSide = 7`
- `useTrendFilter = true`
- `emaFast = 8`, `emaMid = 21`, `emaSlow = 55`
- `magicNumber = 123456`

NOTABLE

Hardcoded to EURUSD H1 only (silently no-ops on any other symbol/timeframe). Grids both directions simultaneously by design (a hedge, not a directional bet); every order does carry a real stop loss (unlike the true no-SL grids #20/#34-36), but the take-profit is only 1/10th the stop distance, so the strategy needs a very high per-trade hit rate for the grid-averaging math to work; max exposure is capped at 7 x 0.01 lot per side since there's no martingale.

Video: <https://www.youtube.com/watch?v=dXzGBoRwMaE> | Source: <https://drive.google.com/file/d/1hCLAWAdcztrEoxFWMSLvJuRVAeCc7oER/view>
