

# Strategy Input Reference

Every strategy built and backtested in this project — identity, full input list with defaults, and best-found parameters where a sweep was run. Symbol GOLD.i# (XM Global), fixed 0.01 lot, \$10,000 nominal deposit.

|                                |        |
|--------------------------------|--------|
| Strategies documented          | 71     |
| Input parameters listed        | 905    |
| With swept best-found settings | 27     |
| With 5-year validation         | 4      |
| Backtest results pooled        | 11,673 |

## How to read the ‘best found’ column

Best-found settings are the highest weekly-profit combination from that strategy’s own parameter sweep, filtered to runs with at least 20 trades and a profit factor above 1.0. They come from a 2-year window unless noted. Only four strategies (50, 52, 61, 65) were validated across a full 5-year gold cycle — and that test showed 98–109% of their profit came from the 2024–2026 bull run. Treat 2-year figures as optimistic.

Strategies with no best-found row were built and compile-verified but either ran only a baseline pass or produced no combination meeting the filter.

## Index — all strategies at a glance
