SUMMARY

I build systematic trading strategies end to end — pull the data, write the backtest, sweep the parameters, then ship the survivors as software that runs unattended. Research covers Indian equities, Nasdaq 100, F&O, gold and Bitcoin, and the configurations that lost money are published alongside the ones that worked.

QUANTITATIVE RESEARCH

- **Bitcoin (BTC-USD), 2014–2026** — 120 daily strategies and 77 multi-timeframe pairs tested. Best system: 2.00 Sharpe at 83.2% CAGR, with a –41.5% drawdown against buy-and-hold's –83.4%.
- **Momentum parameter sweep, Nifty 500** — 8,640 portfolio configurations. Reported the median Sharpe of 1.17 across the whole grid rather than the best row at 2.00.
- **Breakout study, Nifty 500, 2010–2026** — 32,722 breakout events classified over a 60-day horizon. 30% reached +20%; 34% failed outright.
- **Signal-engine comparison** — 10 entry engines over 484 symbols and 192,482 trades, on one universe with identical exits so the signal was the only variable.
- **Nasdaq 100 momentum rotation, 2015–2024** — 41.72% CAGR against 18.30% for QQQ, with a –39.09% drawdown over 284 trades. Survivorship bias stated openly.
- **XAU/USD expert advisors** — 42 automated MetaTrader 5 runs, 83,917 trades, 14 strategies. 20 were profitable; all 42 published.
- **F&O opening-range study** — 7 exit methods on one trade set. 4 lost money, including a 63% win-rate method with negative expectancy.

SYSTEMS BUILT

- **FastAPI trading and reporting service** — 15,264 lines across 33 services, running unattended and publishing 75 automated end-of-day reports to Telegram.
- **Backtesting infrastructure and strategy library** — vectorised pandas/NumPy engines with cost models and regime filters, plus 46 MQL5 expert advisors, 7 Pine Script indicators and 24 research reports.

SKILLS

Programming	Python, pandas, NumPy, asyncio, SQL
Quant	Strategy development, backtesting, parameter sweeps, risk and performance measurement, portfolio construction
Platforms	MQL5, MetaTrader 5, Pine Script
Backend	FastAPI, PostgreSQL, REST APIs
Web	React.js, JavaScript, HTML, CSS, Node.js, MongoDB

EXPERIENCE

Ramraj Enterprises — Equity Trader	Aug 2025 – Present
Trade Indian equities alongside the independent quantitative research above.	
Human Resources roles — The Healer Foundation, Takecare Consultancy, ILP Overseas	Jan 2023 – Jul 2025
Teachnook — Web Development Intern	Jan – Feb 2023
Built React applications with Redux and Node.js services on live client sites.	

EDUCATION & CERTIFICATIONS

Education	MBA , Human Resources & Finance — Bharath University (2022–2024) · BE , Civil Engineering, 81% — Surya Group of Institutions (2019–2022) · Diploma , Civil Engineering, 83% — Surya Polytechnic College (2016–2019)
Certifications	GUVI (2023): Machine Learning, MySQL, MongoDB, AWS, JavaScript, HTML & CSS · Udemy: Web Development Bootcamp · Teachnook: Web Development · AutoCAD, Robotics, DMO
